

### LOBO Post Puller

It takes only one person to remove old fence posts from the ground. The new improved LOBO Post Puller grips the post and lifts the cement base out of the soil with little effort. You no longer need to chain and unchain fence posts to loaders. Simply grab the post with the LOBO Post Puller and release it to discard. No additional workers or chains are needed. Imagine pulling an average two posts per minute. The LOBO Post Puller clamps the post and lifts it out of the ground with a breakout pulling force of 17,000 lbs.

The wide base allows you to pull up posts with concrete up to 23 inches in diameter. Remove round, square, T-shaped or any other shape posts. Remove damaged posts while leaving the fence intact. Maneuver in tight areas for hard to get at posts. The LOBO Post Puller sits low to the ground for maximum visibility and a safety bar protects the skid-steer operator.

How fast do you need to take down an old fence. We'll help you calculate that using the the LOBO Post Puller. Give us a call.
