

**DIG POST HOLES**

# ANYWHERE

## MacKissic Easy Auger

The Easy Auger is a hydraulic post hole auger that a single person can use on residential or commercial projects. There's no need to use manual post hole diggers or two-man power augers. The balance and design of the Easy Auger saves on labor costs while making it easier to dig post holes.

The Easy Auger comes in two models — push and self-propelled. The push model requires the operator to move the auger along. A lever activates the self-propelled model to drive forward to the next position. It provides 275 foot pounds of torque with an auger speed of 145 RPM. Little stands in its way.

The auger tilts for drilling on uneven ground. Downward pressure on the control handle starts the drilling. The balance of the Easy Auger helps lift the auger from the hole. If the auger gets stuck, a push of a lever easily reverses the auger to break it free.

The balance of the machine also makes it easy to tow from project to project. The tow bar detaches from the auger and the Easy Auger is ready to go.

It takes only a few moments to dig a hole and move to the next position. With the work done by one person, you will improve worker production and streamline the installation process.

*Perfect Balance*

*Self-Propelled*

*Single Operator*

### Easy Auger Features *at a glance*

Engine	Measurements (Self-Propelled Model)	Transportation	Auger
9HP Honda, 9 HP Robin, 10HP Briggs & Stratton or 9 HP Vanguard	Length: 105 inches Width: 34 inches Height: 33 inches Weight: 410 pounds	Tow Bar: Detachable Tires: Highway Regulated Hitch: 2" Ball Coupler	<ul style="list-style-type: none"><li>• Forward-Reverse</li><li>• 2 to 18 inch Diameters</li><li>• Pilot Bits, Teeth, Extensions and Adapters</li></ul>
