

# SELF-LOCKING BANDS

## KEEP THOSE AROUND FENCE SAFE

### Self-Locking Fabric Bands

Self-locking fabric bands give a professionally-installed look to a fence as well as a strong and secure bond when attaching chain link fabric to fence posts. The flat surface provides a safe environment for those who may come in contact with the twisted ends of tie wires. That makes the self-locking fabric bands ideal for residential, school, playground and sports park applications.

The self-locking fabric bands are easy to install. The bands are pre-shaped to fit around four different size posts. Simply slide the band around the post, hook the two ends of the band together and tighten with a pliers. Using the pliers, turn the end towards the post and hammer it flat against the post. While other ties can come loose, the locking joint provides a strong hold that will not break loose over time. Looking for an advantage in high traffic, high contact applications? Give us a call.

Powder coated available in black, green and brown

### Self-Locking Fabric Band Features *at a glance*

Post Sizes	Finishes	Specifications	Applications
1 5/8 inches 2 inches 2 1/2 inches 3 inches	Aluminum Powder Coated (Black, Green and Brown)	Size: 0.065 x 0.375 Tensile Strength: 30,000 psi	High traffic, high contact areas such as residential, schools and playgrounds.

**“A safe and secure alternative to tie wires.”**
