

SECURE THE

FABRIC

Hog Ring Fencing Pliers

Hog ringing fabric to tension wire is a snap with the Hog Ring Fencing Pliers available at L&C Enterprises-USA, Inc.

Walk along the fence line and apply a hog ring to secure the fabric to the tension wire. Move to the next spot, turn the magazine and you are ready to apply another hog ring. It's that simple. The collated hog rings feed directly into the jaws ready to go. The magazine holds a 25 hog ring clip. A box of 2,500 hog rings is available at L&C Enterprises-USA.

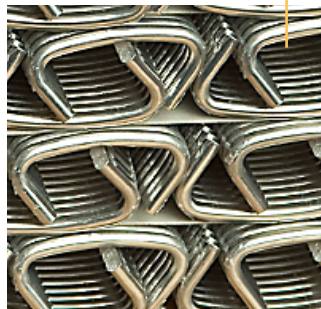

Holding the tool in one hand, apply slight pressure to the handles to hold the ring securely in the jaws. With the other hand, rotate the magazine downward, away from the jaws, to insert a ring in the jaws. Position the hog ring around the fabric and tension wire and squeeze. The opening of the 9-gauge aluminum hog ring is 1-3/16 inches — plenty of room to reach around the fabric and tension wire. It closes to 7/16 of an inch — a perfect closure every time.

- Fasten tension wire.
- Attach signs to the fence.
- Use for stitching and repair.

Don't waste time struggling with single hog rings. Use the Hog Ring Fencing Pliers available at L&C Enterprises-USA, Inc.
