

THE CLEAR FENCING

WINNER

Installink

You can now take advantage of Installink's fence dispensing technology at nearly half the cost. The Installink has many of the features that has made the original Installink so popular with fencing companies. It holds 100 foot rolls or up to 750 lbs., dispenses fabric while the skid-steer moves forward and easily loads fabric when the Installink is tilted forward. It comes with an optional hydraulic unit to control the side kickout and stretching arm. The kickout arm insures the fabric remains level on uneven ground while dispensing fence at 80 percent tension. The side kickout arm is then turned to the stretching position where the stretching arm pulls the fabric tight or to a termination post while increasing tension on the fabric. The standard crow's nest allows access to the upper portion of the fence. There are no moving parts for less maintenance and is built with heavy duty steel that is sandblasted, primed and painted. How can you beat your competition? Give us a call.

The Installink comes in two models:

- 8 ft. Installink for 4 to 8 ft. high fabric
- 10 ft. Installink for 8 to 10 ft. high fabric
